

## Embedded – RTOS C programming Expert

5-days session

Title	Embedded – RTOS C programming Expert
Overview	<p>This <b>5-days</b> training will allow current students, engineers and embedded systems enthusiasts to take a deep-dive into real time operating system architecture and mastering the C-language best practices for embedded system. During the sessions we will learn how to develop &amp; enrich the basic RTOS by adding several stacks and services (e.g., file system, TCP/IP, IoT library, webserver).</p> <p><u>The course/training will mainly focus on the following items:</u></p> <ul style="list-style-type: none"> <li>▪ From Baremetal to RTOS architectures and design cases</li> <li>▪ Overview of majors RTOSs on the market</li> <li>▪ Advanced C programming for embedded systems</li> <li>▪ Stack and heap</li> <li>▪ Pointers, hash tables and binary search trees</li> <li>▪ FreeRTOS deep-dive</li> <li>▪ Scheduling and pre-emption</li> <li>▪ Tick and tickless scheduling</li> <li>▪ Queuing techniques</li> <li>▪ Memory allocation techniques</li> <li>▪ Memory pools</li> <li>▪ Mutex and semaphores</li> <li>▪ Mailboxes</li> <li>▪ Direct memory access</li> <li>▪ Inter-task communication</li> <li>▪ Inter-process communication</li> <li>▪ Protecting shared resources</li> <li>▪ Interrupt handling</li> </ul>
Labs	<ul style="list-style-type: none"> <li>▪ Download and running the FreeRTOS basic example</li> <li>▪ Design and implement a linked list</li> <li>▪ Design and implement a hash table</li> <li>▪ Design and implement a protected memory region</li> <li>▪ Synchronizing interrupt with tasks</li> <li>▪ Adding a file system to the RTOS</li> <li>▪ Adding the TCP/IP stack to the RTOS</li> <li>▪ Adding an IoT interconnect module to the RTOS</li> <li>▪ Adding a compression library to the RTOS</li> <li>▪ Adding a webserver to the RTOS</li> <li>▪ Instantiating a DMA transfer with the FreeRTOS</li> <li>▪ Creating a CLI based interface with the FreeRTOS</li> </ul>
Audience	Software & Firmware engineers that intend to use a real time operating system
Prerequisite	<ul style="list-style-type: none"> <li>▪ Basic knowledge of embedded systems</li> <li>▪ Basic knowledge in C programming</li> </ul>
Seats	[min = 8, max = 16]
Duration	5 days – 40 hours (50% courses, 50% Labs)
